

Photo Search Application (Django)

1. Project Overview

This project is a web-based application developed using Django that allows users to search and view images dynamically. Users can enter keywords such as "cat", "dog", or "nature", and the application fetches relevant images using the Unsplash API.

2. Objective

The main objective of this project is to build a dynamic web application using Django, integrate external APIs, and display images based on user search queries.

3. Technologies Used

- Python,
- Django
- HTML
- CSS
- JavaScript
- Unsplash API

4. System Architecture

User → Search Input → Django Backend → API Request → Unsplash → Response → Display Images

5. Features

- Image search functionality
- Fetch images using API
- Responsive grid layout
- Simple and clean UI
- Real-time image display

6. Project Structure

photo_search (main project)
photos (app)
templates (HTML files)
static (CSS & JS files)
views.py (logic)

urls.py (routing)

7. Working Principle

1. User enters a keyword
2. JavaScript sends request to Unsplash API
3. API returns image data
4. Images are displayed in grid format

8. Output

The application displays images based on user search queries such as animals, cars, and nature.

9. 📄 App link: <https://search-photos-pmky.onrender.com>

10. Conclusion

This project demonstrates how to integrate APIs with Django and build a dynamic web application. It is simple, scalable, and useful for learning full-stack development.

11. Future Enhancements

- Download image feature
- User login system
- Image saving/bookmarking
- AI-based image suggestions
